## WELCOME TO KOONWARRA MERINO STUD'S 47th ANNUAL UNHOUSED RAM SALE

On behalf of Koonwarra Merino & Poll Merino Stud we welcome you to the 47th annual Koonwarra on-property **unhoused** ram sale – the 19th sale at Little Range and the 11th under the total ownership of C.T. Merriman & Son.

**The 120 May/June 2023 drop rams in this year's sale catalogue will be available for inspection from 10.00am, with the auction to commence at 1.00pm.**

To assist with your selections, all 120 sale rams were **side sampled** in early **August 2024** and fleece tested by Riverina Wool Testers, with the averages being micron 18.8, S.D. 3.2, C.V. 17.2, C.F. 99.3, SpinF 17.9 and GFW 109.4. The **meat scanning** was done on **11th September 2024** by Rick Power, along with the **current body weights** for the 120 selected rams, which averaged **89.5kgs**.

On the day of the sale, these Koonwarra **paddock raised** rams will be 15 months old and will have **5 months wool** on them. The rams were **shorn on 19th April 2024** for their greasy fleece weight percentage.

These rams have been paddock reared on grass with access to grain feeders, but **have not been shedded**, ensuring these young rams are acclimatised to natural conditions, be it weather patterns or grass availability. They are in good working order and well grown with good body weights.

*Jono, Anna, Digby, Toby and Zoe, along with Charlie and Pip, invite you to join us at Little Range. A light lunch will be provided, along with a BBQ after the sale.*

## BREEDING FAMILIES AND SIRE INFORMATION

### SEMEN SIRES USED FOR AI PROGRAM

For the 2023 joining program for Koonwarra was all paddock joining. We did not do an AI program in November 2022.

### KOONWARRA BRED SIRES / FAMILIES USED FOR Paddock JOINING

We purchased a half share in a new horn sire at the Tara Park Merino Stud on-property sale in 2023 which we used in the paddock joining. The ram was Lot 3, sired by 7447 and tag number is 035.

The 2023 Koonwarra bred sires/families used for paddock joined were:

## FLEECE TESTING DEFINITIONS

**F.D. – Fibre Diameter:** The mean (average) micron result of a sample.

**S.D. – Standard Deviation:** Measures in microns the spread of fibres either side of the mean F.D. in which 68% (two-thirds) of the fibres lie. The lower the S.D. the more uniform the wool.

**C.V. – Coefficient of Variation:** The C.V. is the S.D. divided by the mean F.D. x 100. C.V. measures the F.D. variability as a percentage. C.V. tends to fall in the range of 15% to 30% – 15% is a very uniform wool, while 30% is a highly variable wool.

**C.F. – Comfort Factor:** Measures the percentage of fibres below 30.5 microns. Calculated as 100 minus % of fibres below 30.5um.

**PLEASE NOTE:** Please remember that all these May/June 2023 drop rams could have a six to eight weeks' spread in their date of birth, from the earliest AI lamb born to the last paddock joined lamb born. Therefore the ram body weights are done only as a guide.

On sale day, there will be individual and current information on each ram including micron, S.D., C.V., GFW% and comfort factor plus sire/family and current body weights along with meat indexes and ram power indexes.

Ram sale measurements comply with the standards recommended by NSW Stud Merino Breeders Association.

## MERINOSELECT RAM POWER INDEXES DEFINITIONS

Ram Power Indexes were done by Rick Powers on 11th September 2024.

### Merino select ram power indexes definitions:

**F.P. – Fibre Production:** Rates animals on their ability to produce merino's for wool production. The F.P. index is aimed at those producers whose majority of sheep income comes from their wool clip. It is for self-replacing merino flocks who keep wethers as part of their wool producing flock. The F.P. index is calculated using a combination of fleece weight, fibre diameter, body weight and C.V. of that animal.

**M.P. – Merino Production:** Rates the animals on their ability to produce progeny for a finer wool operation that has significant surplus sheep sales. The M.P. index is aimed at those producers whose sheep income is a balance of both wool and surplus sheep sales. It is for self-replacing merino flocks who do not keep their wethers for wool production. The M.P. index is calculated using a combination of fleece weight, fibre diameter, body weights and C.V. of that animal.

**D.P. – Dual Purpose:** Target production systems with a balance of income from wool from Merinos and meat production from lambs by terminal sires. It focuses on the genetic improvement of fleece weight and body weight.

NOTE: The figures for the Ram Power Indexes provided in this catalogue are on the Koonwarra 2023 drop rams only. The above definitions have been provided by Sheep Genetics.

## MEAT INDEX EXPLANATION

The Meat Index allows a group of young sheep with different live weights, eye muscle dimensions and fat depth to be analytically compared.

- > The **Eye Muscle Width A** is more to do with type of animal, i.e. shape of that animal.
- > The **Eye Muscle Depth B and C Fat** is associated with the environment and feeding conditions.
